SUMMARY

AI software developer completing a UQ Master of Data Science (Dec 2026). Built three LLM agents at Enigma Global Technologies (payroll, critical incident response, tender costing), including its first agent in production, plus a risk classifier live on AWS SageMaker. Product background: adoption 12% to 33%, support tickets down 66%.

EXPERIENCE

AI Software Developer (Part-time) at Enigma Global Technologies Nov 2025 – Present Brisbane

LLM agents and production ML for a Brisbane agentic AI company: payroll, incident response and tender costing.

- First person at Enigma to put an LLM agent into production.
- Built a payroll agent connecting Jibble time and attendance to Xero: it monitors clock-in and clock-out for every employee, builds the pay run in Xero and sends payslips once the manager approves (human-in-the-loop).
- Built a critical incident management platform: staff record the incident facts and an agent sets up the Microsoft Teams meeting, recommends actions and keeps context across the incident; includes a training component.
- Developed a tender costing agent: the user uploads the tender (RFT) documents and pastes the client specification, and the agent builds the roster and costs the bid; approved and delivered.
- Trained and deployed an incident risk classifier (TF-IDF, SMOTE for a 36:1 class imbalance, XGBoost vs LightGBM vs Random Forest, temporal validation) to a live AWS SageMaker endpoint scoring production reports.
- Wrote the inference handler that rebuilds features from raw JSON per request, avoiding training-serving skew.
- Costed an airport security services tender end to end and wrote win themes for a 24-centre CCTV maintenance bid.
- Designed management dashboards and analytical models; onboarded BizOps clients and acted on their feedback.

Product Manager (Internship) at Wealthy Aug 2024 – Jan 2025 Bengaluru

Product growth and analytics for a fintech's online wealth-management portal; led the homepage revamp.

- Grew online adoption of the Wealthy portal from 12% to 33% in four months by improving user engagement.
- Cut customer support tickets 66% by addressing the usability pain points found in Freshdesk ticket analysis.
- Cut proposal creation time 48% by reworking the proposal workflow.
- Analysed database logs, customer feedback and surveys to identify the barriers to online adoption.
- Ran funnel and cohort analyses and segmented users to target engagement.

Product Manager (Internship) at 5C Networks Dec 2023 – May 2024 Bengaluru

Feature delivery for a teleradiology platform, working with stakeholders and developers across the product lifecycle.

- Launched the Technician Reward Program: 150+ increase in case submissions, DAU conversion up 21%.
- Overhauled the Premium Report system: daily premium case submissions went from 0 to 3+, lifting gross margin.
- Shipped an international client query feature that cut issue resolution time 30%.
- Introduced the Referring Physician Connect feature, improving medical interpretation accuracy 40%.

Data Analyst (Internship) at 5C Networks Jun 2023 – Nov 2023 Bengaluru

Automation and analytics for operations, inside sales and billing at a teleradiology company.

- Automated email alerts for missing client details, improving IT agent response time 35%.
- Automated gross margin calculations and client onboarding, cutting billing errors 30%.
- Ran inside sales operations (call lists, dashboards, automation), raising productivity 25%.
- Curated decision-maker data and re-engaged dormant clients, lifting retention 20%.

EDUCATION

The University of Queensland

Master of Data Science, GPA 6/7

Feb 2025 – Nov 2026 (expected)

Brisbane, QLD

REVA University

B.Tech in Computer Science, CGPA 9.23/10

Dec 2020 – May 2024

Bengaluru, India

PROJECTS

Enhancing Plant Disease Detection Through Transfer Learning With Ensemble Techniques: [IEEE Xplore](#)

- IEEE conference paper (2024): transfer learning with ensemble methods for plant disease detection in agriculture.

Automated Incident Risk Classification (UQ industry capstone with Enigma Global Technologies):

- Relabelled 39.2% of 1,187 incident reports by content; built TF-IDF, SVD, cyclical time and interaction features.
- Compared six models and two SMOTE variants on a temporal split with a future-month holdout; the live endpoint escalates any report whose high-risk probability exceeds 0.25.

SKILLS

Programming & Data: Python, SQL, Java, REST API integration (Jibble, Xero, Microsoft Teams), Git, Colab

Machine Learning: scikit-learn, XGBoost, LightGBM, SMOTE, TF-IDF, transfer learning, ensemble methods

AI Agents: LLM agents, agentic workflows, human-in-the-loop approval, agent memory, workflow automation

Cloud & Deployment: AWS SageMaker, Amazon RDS, AWS IAM, model deployment, Firebase, Vercel

Analytics & Visualisation: Tableau, Power BI, Mixpanel, dashboards, funnel and cohort analysis, segmentation

Product & Research: user research, competitive analysis, product strategy, tender costing, client onboarding

Tools: Notion, Figma, Whimsical, Kiro, Freshdesk, Jibble, Xero, Microsoft Teams

EXTRACURRICULAR ACTIVITIES

Vice-President, FACIT (Forum of Technical and Cultural Excellence), REVA University:

- Led three technical events, including hackathons and tech talks on generative AI and machine learning.
- Co-organised 15+ cultural events and hosted Freshers' Day for incoming students.
- Volunteered in outreach with aged-care homes, Charlie's Animal Rescue Centre and a school adoption program.

Student Immersion Program, Manipal International University, Malaysia

- Completed workshops on blockchain, cybersecurity, IoT and professional ethics.
- Attended the International Conference on Contemporary Issues (ICCI 2022).
